

Fargesia ‘Scabrida’

Having larger than average canes, coupled with prolific shooting periods, this bamboo has culm sheaths with a wonderful reddish-orange color which is striking against the dark green of the new canes. The emerald-green leaves are longer and thinner than that of both *Fargesia robusta* and *Fargesia ‘Rufa’*, giving the plant a more open appearance.

Zone – 6a

Exposure – part sun

Ultimate Height – 16+’

Spacing – 5-8’ on center

Uses: specimen, screen or hedge
